How Evaporative Coolers Work

A simple example is the cooling you feel when stepping out of a swimming pool—the water evaporates quickly from your body, taking heat with it. Evaporative coolers do essentially the same thing by drawing hot air through wet pads using a fan or blower. As water evaporates from the pads, it takes heat from the air with it, resulting in **up to 25°F cooler air** being discharged from the unit.

Energy Savings

An evaporative cooler consumes only **one-fourth of the electricity** of a refrigerated air conditioning unit.

HERE'S WHAT ELSE YOU NEED TO INCLUDE WITH THIS FORM:

- 1 A copy of your dated sales receipt or contractor invoice showing the manufacturer, model number and price of the evaporative cooler purchased.
- 2 A copy of a recent PNM residential electric bill.

Incomplete information will delay or disqualify your rebate. Allow 4-6 weeks for rebates to be processed. All rebate requests must be postmarked **no later than December 31, 2019**.
